

*In the Claims:*

In accordance with 37 C.F.R. § 1.173(d), the below claims reflect changes relative to the original patent. This listing of claims will replace all prior versions, and listings, of claims in the application.

1. (Four Times Amended) A cap for use with a container neck having external means for detachably engaging said cap, said cap being shaped to fit over said neck and comprising
- a top and a [shirt] skirt depending from said top to fit outside said neck, internal means on said skirt to engage said external means to hold said cap on said neck, said top being formed with a central well having a side wall and a bottom, [a] at least one scoreline [extending along said side wall and across] positioned on said bottom, said side wall formed to cause [whereby] a probe having a blunt tip to engage said bottom at a center thereof as the probe is forced into said well, said at least one scoreline positioned such that the blunt tip splits said [well] bottom along said at least one scoreline as the blunt tip of the probe is forced against said center of said bottom so that said probe may enter said neck.

2. A cap according to claim 1 made of resilient material whereby said well is restored substantially to initial condi-
